

EZEKIEL ANDREASON

Software Engineer

[Website Portfolio](#) • [Linkedin](#) • Midvale, UT • 801-403-0595 • zekeandreason@gmail.com

SUMMARY

Adaptable and collaborative developer with experience in C#, Python, Java, SQL, and MongoDB, plus hands-on work building AI-powered solutions and data-driven workflows. Skilled in object-oriented design, debugging, unit testing, and user interface design. A detail-oriented communicator who thrives in team environments and delivers thoroughly validated solutions that meet requirements, improve team alignment, and reduce rework.

SKILLS

Programming Languages: C#, Python, Java, Go, TypeScript, Dart, JavaScript, SQL, HTML, CSS

Databases: PostgreSQL, MongoDB, Firebase

Development Tools: Git, GitHub, Postman, Docker, Azure, Google Sheets

Technical Skills: Agile Development, Debugging, AI Integration, Team Collaboration, .NET MAUI, Blazor Hybrid, Plaid API, React, Tailwind CSS, Japanese (Conversational)

EXPERIENCE

AI Integration Specialist Intern — Vibework Jun 2026 – Present

Neumont Collaborative Project · Salt Lake City, UT

- Configure and optimize autonomous AI agents and workflows to automate specific operational tasks, improving overall efficiency and system performance.
- Design and refine structured knowledge bases to power predictive models and support context-aware, data-driven decisions.
- Conduct testing and full-stack debugging to identify and resolve software bugs in a codebase utilizing Go, Python, TypeScript, React, and Tailwind CSS.
- Set up and configure local development environments to run services locally on docker, enabling comprehensive testing of API calls and database connections.
- Collaborate with the engineering team to test, debug, and integrate AI-powered features into the web application.

Software Engineer Intern — Fintech Startup Project Mar 2026 – Jun 2026

Neumont Collaborative Project · Salt Lake City, UT

- Collaborated on a gamified financial application utilizing .NET MAUI and Blazor Hybrid, focusing on refactoring legacy code and simplifying complex features to improve reliability.
- Investigated, diagnosed, and resolved critical application bugs and database integration issues to restore core functionality.
- Designed and refactored the PostgreSQL database structure, simplifying schemas to ensure data integrity and improve query performance.
- Integrated the Plaid API to securely authenticate financial accounts, fetching and parsing real-time transaction data.
- Prototyped cloud hosting workflows on Azure to support scalable hosting, API communication, and database connections.

Data Analyst Intern — Everpure Jan 2026 – Mar 2026

Lehi, UT

- Reviewed and interpreted complex datasets in Google Sheets, utilizing formulas and functions to uncover operational trends and suggest workflow improvements.
- Organized, cleaned, and validated raw data to ensure high integrity, accuracy, and reliability for business reporting.
- Developed and automated data visualizations, including a Python-based charting script, to generate reports for executives highlighting key engineering performance metrics.

PROJECTS

Kitchen Alchemy — Personal Capstone Project

Nov 2025

- Designed and developed a mobile application that tracks pantry inventory and dynamically filters recipes based on available ingredients, improving meal planning efficiency.
- Implemented barcode scanning and automated shopping list generation to streamline inventory management and reduce manual input.
- Architected and deployed a cloud-hosted full-stack solution using Flutter, Dart, PostgreSQL, and Firebase, ensuring reliable end-to-end functionality.

EDUCATION

Bachelor of Science in Computer Science — Neumont University

Expected Sept 2026

Cumulative GPA: 4.0
